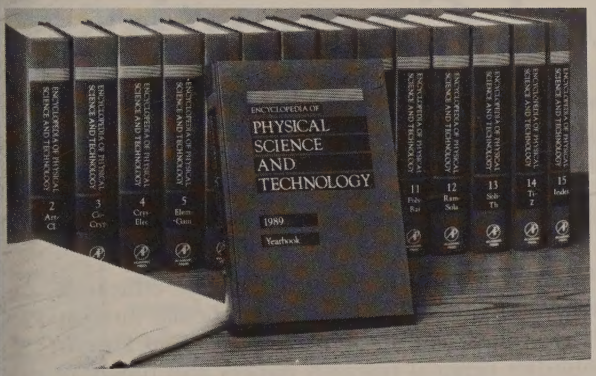
AUTHOR INDEX FOR VOLUME 185 409

Encyclopedia of Physical Science and Technology



editor-in-chief
Robert A. Meyers
TRW Electronics and Defense Sector
Redondo Beach, California

In the few short months since its publication, the **Encyclopedia of Physical Science and Technology** has become *the* contemporary reference in thousands of collections throughout the world. A complete technical library, the **Encyclopedia** is...

Detailed

15 Volumes including a 55,000-entry subject index • more than 550 original articles • 6,000 illustrations and 2,000 tables • 4,000 bibliography entries and 1,200 glossary entries.

Comprehensive

The **Encyclopedia** covers such major subjects as: Aeronautics • Astronomy and Astrophysics • Atmospheric Science and Aeronomy • Chemistry • Communications • Computers and Controls • Earth Sciences and Oceanography • Electronics and Electrical Engineering • Materials Science and Engineering • Mathematics • Mechanical, Industrial, and Civil Engineering • Military Sciences • Nuclear Technology • Physics • Propulsion and Fuels • Space Technology.

Authoritative

All articles are written by world authorities in their fields, including several Nobel prize winners and recipients of the National Medal of Science.

Organized

Articles are arranged alphabetically and include: table of contents, glossary of terms, concise definition of subject, *in-depth* presentations, extensive cross-references, illustrations, tables, and a bibliography.

1987, 15-volume set including index, $2,500.00

Announcing the 1989 Encyclopedia Yearbook

To keep your set of the **Encyclopedia** the most up-to-date reference source for years to come, Academic Press will begin publishing Yearbook volumes in December 1988. Each Yearbook will feature several articles examining new, fast emerging areas of study or offering the latest information on topics already in the **Encyclopedia.**

For more information about the Yearbook or to reserve your copy, please contact your local bookseller or Academic Press. You may also wish to place a continuation order for the Yearbook to ensure that you automatically receive each new volume as it is published.

December 1988/ISBN: 0-12-226916-0

To request a detailed prospectus and sample article, please use the attached business reply card. To order your set of the **Encyclopedia**, please contact your local bookseller or Academic Press, National Sales Department, 1250 Sixth Avenue, San Diego, California, 92101-4311, (619) 699-6345.

An International Forum in Computer Science . . .

Journal of Parallel and Distributed Computing

Editors-in-Chief: **Kai Hwang**
University of Southern California, Los Angeles

Leonard Uhr
University of Wisconsin, Madison

This international journal is directed to researchers, engineers, educators, managers, programmers, and users of computers who have particular interests in parallel processing and/or distributed computing. The ***Journal of Parallel and Distributed Computing*** publishes original research papers and timely review articles on the theory, design, evaluation, and practices of parallel and/or distributed computing systems.

The journal provides an effective forum for communication among researchers from various scientific fields working in a wide variety of problem areas and sharing a fundamental common interest in improving the ability of computers to solve increasing numbers of difficult and complex problems as quickly and as efficiently as possible.

Research Areas Include

- Theory of parallel/distributed computing
- Innovative computer architectures
- Supercomputers and numerical methods
- Concurrent programming requirements
- Parallel algorithms and implementations
- Language, software, and compiler techniques
- Computer networks and protocols
- Multicomputers and distributed processing
- Artificial intelligence machines
- Applications and performance analysis
- Optical computing and neural networks
- New technologies and future trends

Volume 5 (1988), 6 issues
ISSN 0743-7315

In the U.S.A. and Canada: $123.00
All other countries: $160.00

Sample copies and privileged personal subscription rates are available.

MECHANICAL SYSTEMS AND SIGNAL PROCESSING

MECHANICAL SYSTEMS AND SIGNAL PROCESSING

Editor: Simon G. Braun

Technion-Israel Institue of Technology, Haifa, Israel

Mechanical engineers engaged in system engineering as applied to mechanical components and machines are increasingly encountering profound changes brought about by advances in instrumentation and associated computing power. These necessitate the application of techniques involving diverse aspects of systems theory, signal processing, control theory, and statistics. ***Mechanical Systems and Signal Processing*** is intended to provide a forum for the discussion of the research findings in these areas, particularly in the field of dynamics in its broadest sense. The journal stresses applications, with a healthy balance between fundamental and experimental subjects. ***Mechanical Systems and Signal Processing*** strives to publish refereed papers of the highest quality reflecting the activities and interests of workers in academic and industrial research and development.

Research Areas Include

• Diagnostics and expert systems • Diagnostics and quality control • Environmental testing • Fatigue life prediction • Force identification and dynamic loading • Instrumentation and sensors • Machine and material dynamics • Modal testing • Noise source location and cancellation • Pattern recognition • Signals and systems • Simulation and modelling • Software and hardware aspects of signal processing • Time series and statistics • Vibration monitoring and control •

Recent Contents Include

Dominant error localisation in a finite element model of a mechanical structure, **Q. Zhang and G. Lallement.** • Developments in the use of the Hilbert transform for detecting and quantifying non-linearity associated with frequency response functions, **G.R. Tomlinson.** • Examination of a technique for the early detection of failure in gears by signal processing of the time domain average of the meshing vibration, **P.D. McFadden.** • The digital synchronous filtering technique, **W. Moczulski.** • An adaptive observer for on-line tool wear estimation in turning, Part 1: Theory; Part 2: Results, **K. Danai and A.G. Ulsoy.** • Signal processing for single tooth milling monitoring, **S. Braun, J. Rotberg and E. Lenz.** •
